# AtHoc

MASS NOTIFICATION AND WARNING SYSTEM

MCIPAC EMERGENCY MANAGEMENT

## PURPOSE

AtHoc is MCIPAC's primary and preferred method of passing critical emergency and mass notifications for typhoons, destructive weather, active shooter, safety information, evacuation, force protection condition changes, gate closures, and other targeted or mass alerts.

User registration is required by the Department of Defense Instruction 6055.17, as well as local IIIMEF/MARFORJ and MCIPAC Orders. Ultimately, MCIPAC-MCBB G-3/5 and MCAS Futenma Operations sections are tasked with ensuring that emergency and mass notifications reach our target populations on- and off-duty.

## ATHOC REGISTRATION (ACCESSIBLE WITH COMMON ACCESS CARD)

AtHoc profile creation is automatic when users plug their CAC into a government computer. Within 24 hours of account creation, personnel will be able to use their registered e-mail addresses to download and authenticate the Blackberry AtHoc app – the best way to receive timesensitive alerts away from the desktop. Personnel with CAC-enabled computers will be able to update their profiles immediately upon creation using the **CAC**enabled self-service applications.

Once users have access to a government issued computer, they can access the selfservice site via the "purple globe" icon in the bottom right of the desktop or via <u>https://alerts1.mcdsjp.mcds.usmc.mil/Self</u> <u>Service/</u>.

## MOBILE APPLICATION

Downloading the Blackberry AtHoc App to receive real-time alerts on- and off-duty is easy!

- 1. Ensure your AtHoc account is created and your email is provided
- 2. Download the Blackberry AtHoc App from your device's App Store
- Enter registered email address in registration window and click "continue"
- 4. Validate email address via link provided
- Return to AtHoc app and enter: MCIPAC as the organization code.
- "Open this page in AtHoc Notifier" message will appear, click "Open"
- If you receive an error notification, click the "Send Log" option and enter\_MCIPAC\_EM@usmc.mil in the To: line for troubleshooting and response.
